

Iridium® Security Module

Features

- Fits easily into the back of the Motorola 9505 satellite phone
- Type 1 end-to-end security
- Provides secure calls between ISM-equipped Motorola 9505 satellite phones and, when operating through a special interface in the U.S. Government Iridium gateway, with existing Secure Telephone Units (STU-IIIs)
- LED security indicator provides information on the current mode of the ISM
- Goes CLEAR before and after secure operation
- Contains internal Lithium battery
- Weighs only 49 grams
- RED Data Port Provides:
 - EKMS keying using data transfer devices
 - Secure software upgrades

General Dynamics' Type 1 Iridium® Security Module (ISM) is designed to attach to the Motorola Satellite Series™ 9505 portable telephone, intended for the protection of Iridium satellite voice communications at

security levels up to and including Top Secret. With this small attachment, authorized users who subscribe to satellite voice service are able to digitally encrypt their sensitive voice conversations.
