

New Product Announcement

March 2008

New GEM X™ Software Remotely Manages General Dynamics' HAIPE® IS-Compliant Encryptors

Product Name: GEM X™ Encryptor Manager

Web address: www.gdc4s.com/GEMX

The new GEM X software application enables network administrators to remotely monitor and control up to 500 HAIPE IS version 1.3.5 TACLANE® encryptors from a central location. With an improved, more intuitive user interface, GEM X runs smoothly on either Windows XP® or Solaris 10™ workstations. The JAVA-based GEM X product is a complete software package that is easy to install without additional software or licensing required.

Overview:

- Familiar Windows®-based interface
- Multiple information views for maximum flexibility and efficiency
- Cost effective solution – no 3rd party software required
- Only network manager product to support the new TACLANE®-Micro (KG-175D)
- Enables remote management of all General Dynamics IP-based encryption products (including software upgrades)

Compliance:

- Simple Network Management Protocol (SNMP) version 1 and version 3

Availability:

- Immediate; GEM and GEM Solo products currently under warranty may be upgraded for the new GEM X software at no additional charge
- For networks of 25 encryptors or less, GEM X Lite is available

GEM-X enables efficient management of up to 500 HAIPE version 1.3.5 TACLANE encryptors.
