New Sectéra® vIPer™ Phone Provides End-to-End Information Assurance for Voice over Internet Protocol (VoIP) Networks

General Dynamics introduces fully integrated alternative to legacy secure telephones.

Product Name: Sectéra vIPer Phone

General Dynamics' new Sectéra vIPer phone protects classified conversations over Internet Protocol (IP) networks for U.S. military and government personnel. Based on Session Initiation Protocol (SIP), the phone is

intended to provide multiple security levels from Sensitive but Unclassified to Top Secret. The vIPer phone is also software-upgradeable with extensive memory to accommodate future enhancements. Designed to meet a standard desk-top form-factor, the vIPer eliminates the need for multiple phones for secure and clear voice or data communications.

vIPer Product Details:

- Fully integrated information security
- Secure Communications Interoperability Protocol (SCIP) compliant
- Commercial, open standards
- Large, easy-to-read display
- Feature set exceeds capabilities of commercial VoIP phones
